THE EMBEDDED BOND API FIT CHECKLIST

Qualify online software platforms for embedded surety bond opportunities with the Merchants Bonding API.

Check the Signals

Any online platform that collects client data during onboarding has the framework for an embedded surety bond API.

- ☐ Does it license or onboard other businesses?
- ☐ Does that license trigger a surety bond requirement?
- ☐ Is bonding data already collected during onboarding?
- ☐ Does onboarding stall at the bonding step?

Yes to all four?

You may have an embedded bond opportunity.

What is an API?

Your online platform already collects the data. An API transfers it straight to the Hub, with no forms, no re-entry, and no leaving the online platform, and the bond comes back issued.

**Data
Collection**
